

The WallPro 750 is a wall mounted retracting belt barrier designed for restricting access in very long span applications such as warehouses, machine guards, and airport tarmacs. The belt mechanism is protected by a heavy-duty housing designed for outdoor use and is supplied with a wall mounting bracket for attachment to any vertical surface. The mounting bracket is adjustable allowing the belt unit to be set so the belt can be pulled out at any angle.

► Specifications

Height	5.3"
Depth	9.5"
Weight	13lb
Belt Width	2"
Belt Length	55' or 75'

NOTE: When retracting the belt we recommend walking it back into the unit. Allowing the belt to drag on the ground can damage the belt end and cause the belt to twist.

► Belt End Options

Universal (standard)

Connects to a receiver clip (supplied) and locks in place.

S-Clip (optional)

Wraps around any vertical structure and clips back onto the belt.

The head unit can be simply removed from the wall mount bracket so the same unit can be used on multiple mounting brackets within your facility.

► Features

- Heavy duty ABS body, durable and weather proof
- Woven nylon belt, won't fray or pucker
- Adjustable mount, belt can pull out at an angle
- Locking belt end so belt can't accidentally detach
- Belt brake for slow safe belt retraction
- Detachable from mount (needs wrench) – one head can be used on multiple mounts

Supplied with wall fixings.
